

Construction at the State Street Bridge for the week ending Friday, June 21, 2013 was highlighted by the removal of the temporary surcharge material and the placement of asphalt for the pedestrian path and west approach roadway. The following photos depict the project progress:

1. The contractor began removing the temporary surcharge material from the east approach.

Shown above are images of the contractor beginning to remove the temporary surcharge material.

2. The contractor placed asphalt for the pedestrian bridge.

Shown above are images displaying the progress during the placement of the asphalt scratch course on the pedestrian bridge.

Shown above is the contractor installing the waterproofing membrane (top left), the placement of asphalt (top right), and the pedestrian bridge after the asphalt was placed and compacted (bottom).

3. The contractor placed asphalt for the pedestrian path and west approach roadway.

Shown above is the placement of asphalt for the pedestrian path at the east side of the pedestrian bridge (top left), the placement of asphalt for the easterly portion of the pedestrian path (top right), and the placement of asphalt for the west approach roadway (bottom).
